Art Unit: 1642

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-21 and 40-56, drawn to a kit for measuring expression of the a plurality of gene expressions and a method for classifying a patient having diffuse large B-cells lymphoma (DLBCL), comprising measuring expression of a plurality of genes, in a tumor sample from the patient, classified in class 435, subclass 6 and class 536, subclass 24.3.
- II. Claims 22-39, drawn to a method for obtaining a formula for characterizing patients having a disease, comprising correlating normalized expression values of plurality of genes in tumor samples obtained from patients having the disease to at least one known classification characteristic of the disease, classified in class 435, subclass 4 and 287.2.
- III. Claims 57-76, drawn to a method for predicting survival in a patient having DLBCL, comprising measuring and determining the expression of the genes in a sample containing tumor cells from the patient, classified in class 435, subclass 4 and 7.23.

Inventions are distinct each from the other because of the following reasons:

Invention I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). Invention I, II, and III are unrelated because each invention have different method objectives and different modes of operation. Invention I is a kit and a method for measuring plurality of gene expression and classifying a patients, performing the method needs samples from patients, who are suspect to have such disease. The kit for measuring the gene expression contains nucleotides and other required material for measuring the gene expression.

Invention II is method for obtaining a formula for further characterizing patients having a disease, which involves a calculation and analysis of the data from tested samples, a computer and statistics software may be required. Invention III is a method for predicting survival in a patient having the disease, which

Art Unit: 1642

involves correlation and comparison of the calculated data with the clinical outcome in a patient, which may require the patients having the disease at different stages and have experiences of different treatments before.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification searching the inventions of groups together would impose a serious search burden. The search required for one group is not required for the other groups because each group requires a different non-patent literature search due to each group comprising different products and/or method steps, Therefore, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lei Yao, Ph.D. whose telephone number is 571-272-3112. The examiner can normally be reached on 8am-4.30pm Monday to Friday.

Any inquiry of a general nature, matching or file papers or relating to the status of this application or proceeding should be directed to Kim Downing for Art Unit 1642 whose telephone number is 571-272-0521

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Siew can be reached on 571-272-0787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
